DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

Claim 1 recites an antenna comprising a central core having a central coupling region, one or two pairs of radiating antenna lines formed on the surface of the central core, and a balun transformer formed on a circuit board and electrically coupled to the radiating antenna lines, wherein the circuit board has a protruding structure to affixing into the central coupling region of the central core, and wherein a signal input/output end of the antenna is at another end of the balun transformer.

Claim 12 recites a balun structure for use in electrical coupling to an antenna radiating part comprising a circuit board, a first path on the circuit board including a circuit formed from a capacitor and an inductor and having a first equivalent length with respect to an operating wavelength, and a second path on the circuit board including a circuit formed from a capacitor and an inductor and having a second equivalent length with respect to an operating wavelength, wherein an equivalent length different between the first and second paths is half wavelength, and wherein the first path and the second path have a commonly connected node for serving a signal input/output end.

None of the prior art show or suggests the above antenna system and the balun structure.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
